SUMMARY

A results-driven Full-Stack Web Developer with 6+ years of experience in designing and developing modern web applications, specializing in Next, Node, Django and Fast API. Expertise includes crafting robust backend systems, building responsive frontends, and a strong foundation in DevOps and cloud infrastructure. Passionate about integrating AI/ML technologies to create innovative solutions.

EXPERIENCE

Senior Software Engineer

Remote

[Freelance](#)

06/2022 - Present

Independent software development for various international clients

- Led the development of multiple B2B and B2C platforms for international clients across e-commerce, logistics, and beauty industries.
- Architected a real-time complaint resolution system in GCCS, achieving a 30% increase in tenant satisfaction and improved operational transparency across departments.
- Built scalable MVPs for startups in logistics, SaaS, and e-commerce domains, resulting in 3+ repeat contracts and a 40% average reduction in time-to-market.
- Improved project delivery efficiency by 20% through leading the full software development lifecycle (SDLC).
- Achieved 100% on-time launches with zero critical post-deployment bugs, contributing to sustained client growth.
- Increased client satisfaction by 15% while managing schedules and adapting to changing client needs.

Senior Software Engineer

Lahore, Pakistan

[Technology Innovation](#)

02/2024 - 05/2025

Company delivering innovative tech solutions across different fields

- Designed and launched high-traffic food e-commerce platforms ("One Sale", "Capone Food") with optimized checkout and inventory workflows, achieving a 25% boost in conversion rates and 99.9% uptime.
- Led a cross-functional team through system architecture planning, performance optimization, and Shopware integration, improving site speed by 45% and reducing page load time to under 2 seconds.
- Enhanced code quality by 30% through conducting code reviews and mentoring developers.
- Impact: Reduced page load time by 40% and increased conversion rates through UX enhancements.

Senior Software Engineer

Lahore, Pakistan

[WorkHub](#)

02/2022 - 02/2024

A company providing innovative work solutions and technologies

- Developed an AI-powered chatbot "Work Bot" using OpenAI and vector databases, enabling real-time intelligent document search and reducing manual lookup time by 70%.
- Built a real-time calling and messaging platform with a scheduling module integrated with Google and Outlook calendars, streamlining communication for 1,000+ users across multiple regions.
- Resulted in 25% increase in system maintainability by designing and deploying a microservices architecture.
- Impact: Boosted user retention by 35% through AI-powered features and reduced booking time by 50%.

Software Engineer

Lahore, Pakistan

[DigiLynx](#)

07/2020 - 02/2022

A technology company focused on delivering digital solutions

- Increased product portfolio by launching 4 major platforms, including e-commerce and insurance portals.
- Integrated cloud infrastructure and CI/CD pipelines, reducing deployment time by 60% and achieving 85% automated testing coverage across services.
- Increased user engagement by 40% through collaboration with designers and UX teams to craft seamless user journeys.
- Impact: Increased order processing speed by 60% and improved product engagement metrics.

Junior Software Engineer

Lahore, Pakistan

[Emerssive Solutions](#)

07/2019 - 07/2020

A firm dedicated to creating solutions for educational and business sectors

- Engineered a multilingual School Management System and an automated exam scoring system (C3S Testing).
- Developed a React Native e-commerce app for Plant n More, achieving 1000+ downloads in 3 months and improving mobile order conversion rate by 35%.
- Achieved 90% product release readiness by collaborating with QA and client teams for iterative product refinement.
- Impact: Reduced school administrative burden by 70% through digital transformation.

EDUCATION

BS (Hons) - Computer Science

Lahore, Pakistan

University of Punjab (PUCIT)

01/2016 - 01/2020

CERTIFICATIONS

Generative AI Certification

[Generative AI Certification from Datacamp](#)

AWS Cloud Practitioner Training

[Certification covering the fundamentals of AWS](#)

CERTIFICATIONS

Advanced Web Development Workshops
Workshops that deepen understanding of web development

KEY ACHIEVEMENTS

Project Delivery Successfully delivered complex projects for diverse industries, resulting in improved client satisfaction and operational efficiency	AI Implementation Key contributor to the development of an AI-driven system that significantly improved user interaction and query response
---	---

SKILLS

Apache, Apache Spark, API Gateway, Agile, AWS, AWS Cloud, AWS Lambda, HTML, ES6+, Git, SQLAlchemy, Django ORM, Docker, EC2, Django Rest Framework, Flask, API Design, GraphQL, GCP, JavaScript, TypeScript, React, NPM, Vue, Nuxt, Next.js, Node, Express.js, NestJS, S3, jQuery, JWT, RESTful API, Azure, Payment Gateways, Laravel, CSS, SASS, Tailwind, MongoDB, Stripe, Vercel, SQL, OAuth, WEBRTC, SQS, PostgreSQL, Celery, Python, NoSQL, RDBMS, Redis, Sentry, Memcached, WebSockets

PROJECTS

Midora AI Midora AI app for ai content generation - Built Midora, a multi-provider AI SaaS platform integrating OpenAI, Claude, Gemini, and other models into a unified workspace, reducing tool fragmentation and improving productivity. - Architected scalable project-based conversations, intelligent search, and usage analytics, enhancing context retention and user efficiency. - Developed a full admin and billing system with model configuration and reporting, enabling SaaS monetization and operational scalability.	07/2025 - 02/2026
One Sale One Sale (Wholesale E-Commerce) - Improved sales by 20% by optimizing cataloging and checkout in a full-stack food wholesale marketplace. - Impact: Reduced shopping time by 25% and streamlined admin workflows.	02/2024 - 05/2025
Connect Platform Connect Platform - Increased user engagement by 30% by developing a real-time communication app for video/audio calls and messaging. - Successfully deployed socket-based event handling on AWS, increasing system efficiency by 30%. - Impact: Enabled teams to communicate seamlessly in real-time, reducing meeting friction.	02/2022 - 02/2024
Scheduling App Scheduling App - Increased scheduling efficiency by 30% by designing an integrated real-time platform with Google Calendar and Outlook. - Enhanced booking reliability and user retention, resulting in a 15% increase in repeat customer bookings.	02/2022 - 02/2024
Black Acre Black Acre - Improved project completion rate by 20% by engineering a platform for task boards and reporting. - Enhanced productivity tracking, resulting in a 15% increase in team efficiency.	04/2021 - 02/2022
Lights Canada Lights Canada (E-commerce) - Increased online sales by 15% by creating a scalable electronics store with dynamic listings. - Improved transaction processing by \$50k annually by launching a reliable platform with 99.9% uptime.	07/2020 - 11/2021
Work Bot Work Bot - Increased document access efficiency by 30% by developing an AI platform integrating with Google Drive. - Increased document query response accuracy by 15%, resulting in \$10k cost savings.	01/2024 - 01/2024
GCCS GCCS – Building Management System - Improved complaint resolution efficiency by 30% by developing a platform for tracking and managing across 100+ buildings. - Enhanced response efficiency by reducing issue resolution time by 30%.	10/2022 - Present
Care Cart Care Cart - Boosted user engagement by 30% by developing backend services for a food delivery platform. - Increased API efficiency by 30%, resulting in a 25% user interaction improvement.	11/2023 - Present

PROJECTS

Soins Karisma	02/2023 - 11/2023
Soins Karisma	
• Improved booking efficiency by 30% through multi-role support design in a salon management platform. • Improved centralized control boosted inventory turnover by 15% and reduced staffing costs by 10%.	

Kamlink	11/2023 - 08/2024
Kamlink– Healthcare CMS/CRM System	
• Developed a HIPAA-compliant CRM platform boosting user engagement by 15% with a microservices architecture. • Enhanced operational efficiency, cutting patient onboarding time by 30%, saving \$25,000 annually..
